Professional Summary

Java Full Stack Developer with 1.5 years of professional experience building and enhancing enterprise applications using **Java, Spring Boot, React, MySQL, and PostgreSQL**. Experienced in developing **REST APIs**, integrating third-party platforms (**Microsoft Teams, Zoom**), and implementing **JWT authentication and role-based access control**, with personal projects built on **microservices, Kafka, RabbitMQ, and Docker**. Improved API response times from up to 15s to under 3s through **SQL query optimization, indexing, and bulk data access**.

Technical Skills

Languages	:	Java, JavaScript, SQL
Frontend	:	React.js (ReactJS), Next.js, Redux, HTML5, CSS3, Tailwind CSS
Backend	:	Spring Boot, Spring Cloud, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices, JWT, RBAC
Databases & Querying	:	MySQL, PostgreSQL, MongoDB, Redis, Stored Procedures, Triggers
Messaging & Architecture	:	Apache Kafka, RabbitMQ, Event-Driven Architecture, Saga Pattern, API Gateway, Service Discovery (Eureka)
DevOps & Observability	:	Docker, Docker Compose, Prometheus, Grafana, Loki, Tempo
Tools	:	Swagger / OpenAPI, Git, GitHub, Maven, Postman, IntelliJ IDEA, VS Code
Familiar With	:	Kubernetes, AWS (IAM, EC2, S3, RDS)

Work Experience

Infocareer Pvt Ltd June 2025 – Present
Chennai, India

Junior Developer (Promoted from Software Trainee) *January 2026 – Present*

- Developed and enhanced features for a **Learning Management System (LMS)** using **Java, Spring Boot, MySQL, React.js and Redux**.
- Built a centralized **meeting management system** integrating **Microsoft Teams and Zoom** via **third-party REST APIs**, supporting meeting creation, scheduling, updates, and cancellation, with participant data synchronization and a unified **React** interface across two platforms.
- Consolidated exam data from multiple sources into centralized tables using **SQL Stored Procedures and Triggers**, with **audit logging** to track data processing and changes.
- Optimized response times across LMS **REST APIs**, reducing latency from **up to 15s to under 3s (80% faster)** using **bulk queries, native SQL, database indexing, and query optimization**.
- Debugged and resolved issues across **backend (Spring Boot)** and **frontend (React)** modules, improving application reliability and supporting smooth feature releases.
- Enhanced a **sales management application** by redesigning the UI using Next.js and Chart.js, adding **data visualization charts**, and implementing **multi-theme support**.

Software Trainee *June 2025 – December 2025*

- Independently developed the complete backend of an internal **Lunch Subscription Management System** using **Java, Spring Boot, and MySQL**, implementing business logic for employee subscriptions, attendance tracking, monthly cost calculation, and payroll processing.
- Built the application's frontend using **React and Tailwind CSS**, creating responsive user interfaces and integrating them with backend **REST APIs**.
- Implemented **JWT (JSON Web Token) authentication** and **Role-Based Access Control (RBAC)** to secure APIs and enforce role-specific permissions.
- Integrated employee and holiday data from another internal enterprise system, enabling **data synchronization** between applications.

Projects

ShopSense – Microservices-Based E-Commerce Backend | Github Link

- **Role:** Backend Developer
- **Technologies Used:** Java 25, Spring Boot, Spring Data JPA, Spring Cloud Gateway, Netflix Eureka, MySQL, PostgreSQL, MongoDB, Redis, Apache Kafka, RabbitMQ, Docker Compose, Prometheus, Grafana, Loki, Tempo
- Designed and built a **microservices-based backend** with dedicated services for users, product catalog, inventory, orders, payments, media, notifications, and workflow orchestration.
- Developed **REST APIs** for catalog and commerce operations, with request routing through **Spring Cloud Gateway** and **service discovery** using **Netflix Eureka**.
- Implemented **event-driven architecture** using **Apache Kafka and RabbitMQ** for asynchronous messaging and order workflow coordination.
- Applied the **Saga pattern** to manage distributed order transactions across services, handling inventory reservation and payment processing through asynchronous events.
- Configured data persistence with **MySQL, PostgreSQL, and MongoDB**, and **Redis** caching.
- Used **ShedLock** to coordinate scheduled jobs across service instances and prevent the same distributed task from running concurrently.
- Containerized services with **Docker Compose** and added observability using **Prometheus, Grafana, Loki, and Tempo** for metrics, centralized logging, and distributed tracing.

TastyTrack – Full-Stack Food Delivery Web Application | Github Link | Video Link

- **Role:** Full-Stack Developer
- **Technologies Used:** Java, JSP, Servlets, Hibernate, MySQL, HTML, CSS, JavaScript
- Developed a full-stack **food delivery web application** using **Java, JSP, Servlets, and Hibernate** with a **MySQL** database.
- Implemented server-side business logic and database operations using **Hibernate ORM**.
- Built responsive user interfaces with **HTML, CSS, and JavaScript**, integrated with the backend.

Certifications

Java Spring Boot Microservices & eCommerce Project Masterclass | **Link** December 2025

Udemy

- Built a scalable **microservices-based eCommerce application** using **Java and Spring Boot**, applying **Microservices Architecture, Spring Cloud, REST APIs, Eureka Service Discovery, and API Gateway**.
- Implemented asynchronous, **event-driven communication** between services using **Apache Kafka and RabbitMQ**.
- Studied **distributed systems** concepts including scalability, fault tolerance, monitoring, and **microservices observability**.

Java Full Stack Development | **Link** July 2024 – January 2025

TAP Academy, BTM Layout, Bengaluru

- Trained in **Core Java, Advanced Java, JDBC, J2EE, Servlets, Spring Boot, Hibernate, MySQL**, and frontend development.
- Gained hands-on experience in **OOP, Collections, Multithreading, Exception Handling**, and **Java 8 features** (Lambda Expressions, Stream API).
- Applied full-stack skills in projects, including the **TastyTrack** online food delivery application.

Education

Kongunadu College of Engineering and Technology 2020 - 2024

Bachelor of Engineering in Electrical and Electronics Engineering

Government Higher Secondary School 2019 - 2020

State Board in Bio Maths

Government High School 2017 - 2018

State Board
